OCT 16 2001

Dear Ms. Hanlon:

I am writing to ask that the Department of Energy recommend to President George Bush that the site at Yucca Mountain, Nevada be designated the national repository for high-level radioactive waste and spent fuel.

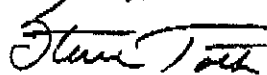

We, as American taxpayers, have funded the billions of dollars to study this strategically important issue. We have also been patient through the various administrations to act on this issue. We must listen to the experts and move forward.

I have spent eight years of my career at the Limerick Nuclear Generating facility in Pennsylvania, finishing as a Shift Technical Advisor. We pride ourselves by maintaining the safe and reliable operation of our facility. We know that we are not alone in this agreement between nuclear generators and the Nuclear Regulatory Commission.

We continue to uphold our responsibility to generate electricity in a safe manner. We urge President Bush and the government to uphold their responsibility to accept the spent fuel from nuclear generators and store it in a single location.

It is time to act and move forward with the Yucca Mountain site.

Sincerely,

Steve Toth
